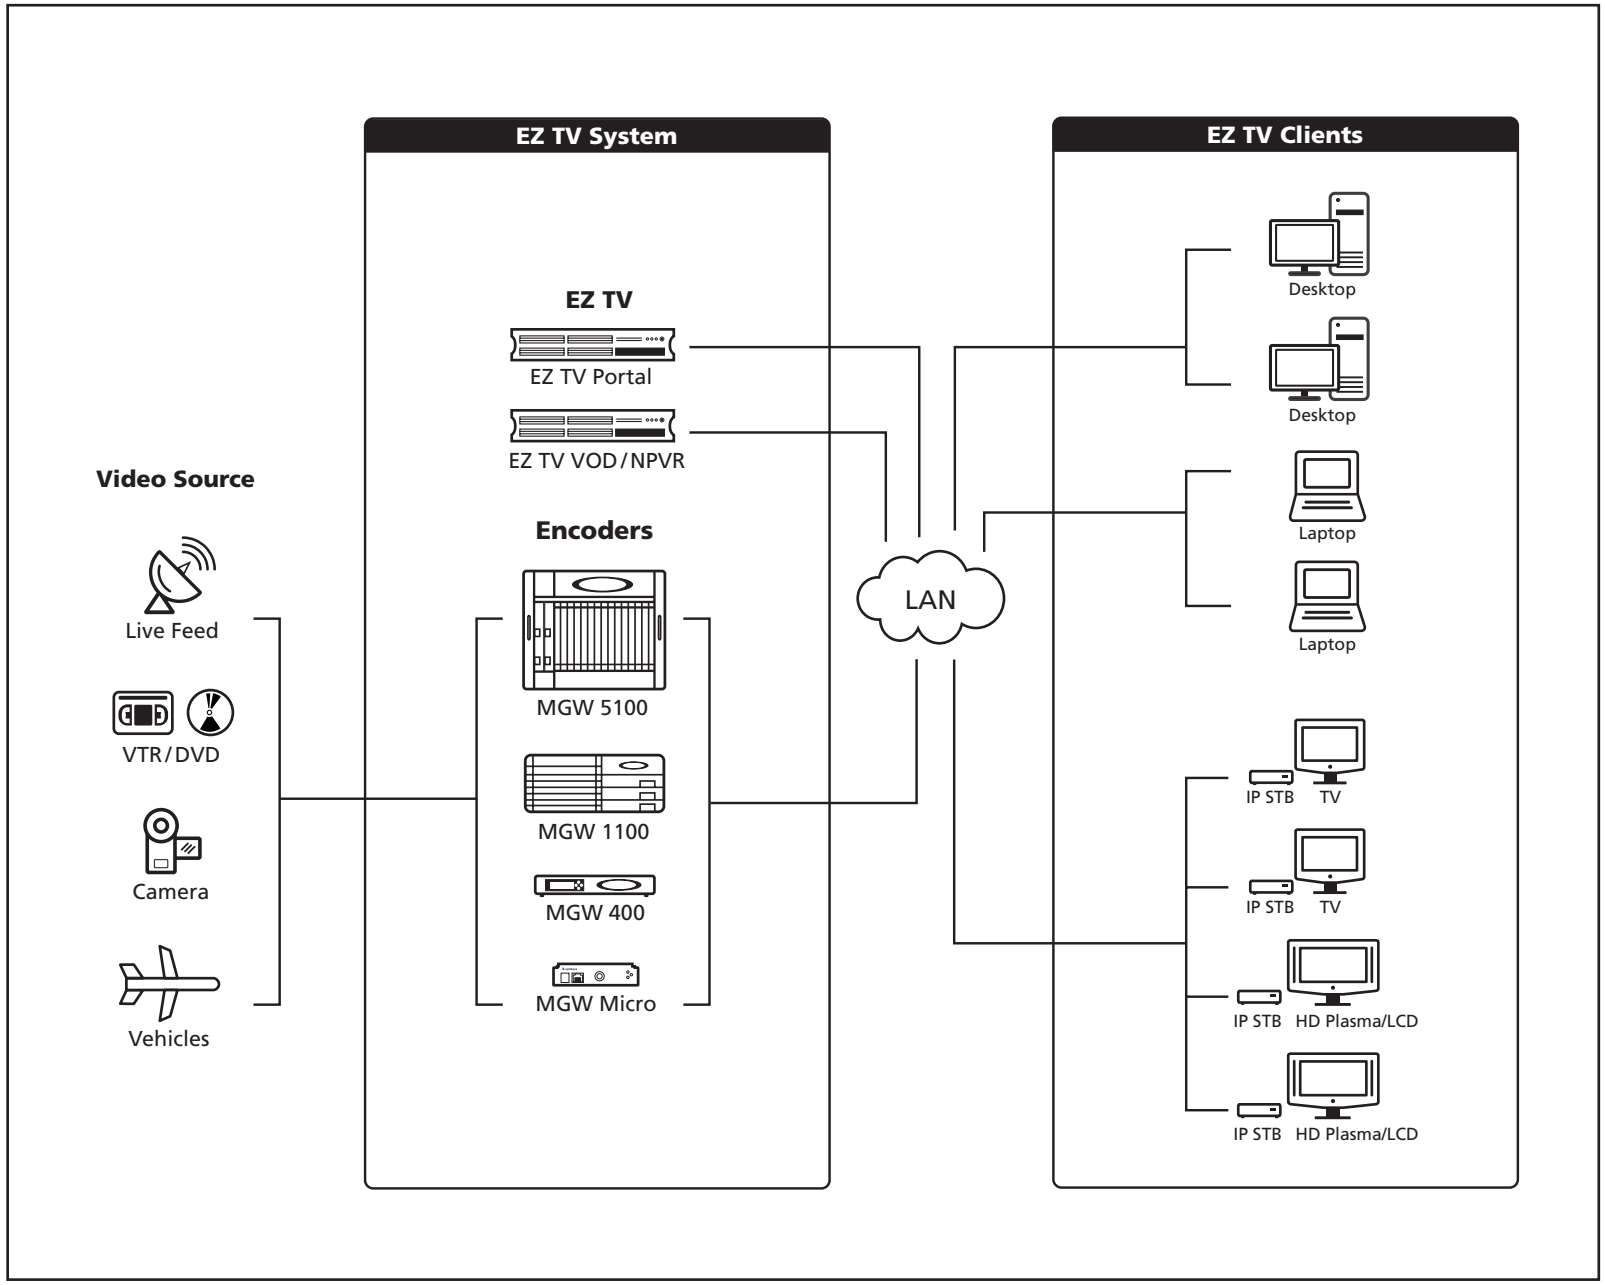
EZ TV IPTV System



Video from a variety of sources is encoded by Optibase encoders or others into MPEG-1, MPEG-2, MPEG-4 part 2 or H.264 streams, which are then streamed over the organization's IP network.
The EZ TV Portal administrator maintains a list of all of the encoded channels and all video content available on the EZ TV VOD / NPVR server and groups them into distinct asset groups.
All of this information and content is then made available, live and on-demand, to a large variety of EZ TV clients, from Windows and Mac desktop PCs, through laptops and up to TV screens connected to Set Top Boxes.

Notes:
